Second Method Materials.--An expansion apparatus similar to that shown in Fig. 27. A meter stick. Micrometer screw gauge. Copper boiler. Thermometer. Funnel. Ring stand. EXERCISE 1. The operations described in 2 and 3 under the First Method are to be followed in this exercise. The pointer in Fig. 27.--Apparatus for the Accurate Measurement of Expansion. this case refers to the index E, Fig. 27, which moves in front of the circular scale D. 2. Measure the length of the rod AB between the support F and the roller C. Measure the diameter of the roller G with the screw gauge in at least four different places. 3. Make a second trial by beginning with cold water as before and repeating the operations described. 4. Since in order to produce one complete revolution of the roller, the rod would have to expand an amount equal to the circumference of the roller, the expansion actually made by the rod is given by the following equation: . degrees moved over . f. Expansion =--2 X circumference of roller. Prom the measurements taken in each trial, compute the expansion of the rod for the entire change in temperature and the coefficient of expansion of the metal...
